Gentlemen:

We are presently conducting experimental studies on the effects of cigarette smoke on leukocyte activation, and attempting to determine how to prevent this phenomenon in the in-vivo microcirculation.

I would be interested to find out if some of this work may be supported by your Institution, and would appreciate receiving an application for support, as well as literature describing your activities.

Thank you for your consideration of this request,

A handwritten signature in cursive script, reading "Marcos Intaglietta".

Marcos Intaglietta, Ph.D.
Professor of Applied Mechanics
and Bioengineering
